Introduction To

NITROKEN

2023 - Version 1.0

NITROKEN LOGO:

ABSTRACT

NITOKEN is a blockchain-based structure that produces and develops solutions on DeFi and SocialFi. This Whitepaper includes the definition of NITOKEN and NITO Token, their purpose of use and the solutions they offer to the industry. NITOKEN aims to provide free, safe and fast experiences to its users by producing and developing blockchain-based decentralized projects.

INTRODUCTION

Blockchain technology has become widespread today in order to produce decentralized solutions in finance, industry, health, transportation, software and many other fields. Blockchain is a shared, immutable ledger that simplifies the process of recording transactions and tracking assets across a business network. Almost anything of value can be tracked and traded on a blockchain network, reducing risk and lowering costs for everyone involved. The concept of decentralized finance (DeFi) as a blockchain-based technology is one of the most popular achievements of blockchain, involving digital assets, smart contracts, protocols and applications.

Decentralized Finance (DeFi) is a new financial paradigm that leverages distributed ledger technologies to provide services

such as transferring, investing or exchanging crypto assets without relying on a traditional, centralized intermediary. A number of DeFi protocols implement these services with a smart contract, that is, software programs that encode the logic of traditional financial operations. The Technology of Decentralized Finance (DeFi). Bank for International Settlements, Monetary and Economic Department.

SocialFi appears as a subgroup of DeFi. In WEB 2.0-based social networks, users are subject to many sanctions such as recording personal information and censorship. It is stated that social media components can be offered as blockchain-based tokens and SocialFi can be a solution to the exact problems of centralized social media. As the Nitrocoin team, we work towards our goal of being a pioneer in the sector by developing projects especially in the fields of DeFi and SocialFi.

1. NITROKEN OVERVIEW

1.1. What is NITROKEN?

Nitroken is an organization that aims to provide solutions to the problems of centralized structures by producing blockchain-based DEFI and SocialFi projects, and is on its way to becoming one of the leading structures in the sector with its decentralized applications.

Blockchain was developed to make it impossible to change, hack or manipulate information in the system and to record the information. So, Nitroken aims to provide its users with a safe, fast, uncensored and decentralized experience with its projects. The cryptocurrency that will be used in its projects is NITO. Below is the description of NITO, the official cryptocurrency of the NITROKEN organization.

1.2. *What is NITO?*

NITO is a cryptocurrency produced to be used in projects developed by the Nitroken Organization. NITO is a token. It is a token produced according to BEP20 standards on the Binance Smart Chain network. It will be used in various projects of Nitroken and its usage areas will be further expanded.

1.3. NITROKEN VALUES

a. Vision

Nitroken's priority is to create commercial environments for our users that are safe, fast, transparent, borderless and do not require third parties. NITROKEN's vision is to create a completely free, transparent, secure and comprehensive financial system led by decentralization.

b. Mission

Nitroken has examined in detail the problems created by centralized structures and aims to bring a new breath by examining the solutions provided by decentralized structures.

Nitroken's mission is to provide and continuously improve unique decentralized structure solutions to its users. It continues to develop its projects with new and unique solution proposals by producing projects in the fields of DEFI and SocialFi. Various projects are being developed without slowing down, acting as a bridge between DEFI and SocialFi.

c. Problem

In centralized systems, all information that is not verified by the centralized system is considered invalid. In a decentralized

system, a horizontal decision-making mechanism comes into play instead of the top-down verification hierarchy applied in the centralized system. With a decentralized structure, an institution, authority, organization or person cannot have authority or control over the network and the transactions of individuals using the network. Since it is difficult to ensure security and control in centralized structures, vulnerabilities caused by being connected to certain components in centralized structures are reduced thanks to Blockchain technology in decentralized structures, and interruptions such as problems and system failures are eliminated.

Examining the advantages provided by Blockchain technology and decentralized structures, our team has begun to produce and develop solution suggestions by examining current problems. The NITROKEN team addressed the funding problem of cryptocurrency projects while designing its first project. When we

examine the current problems, we see that there are some problems in centralized IDO platforms. Start-up projects that do not have sufficient resources must be able to access resources and at the same time, the rights of investors must be protected. It has been observed that centralized IDO platforms generally protect investors. As NITROKEN, it is explained in detail below that we have taken precautions to protect both investors and projects on our decentralized funding platform. These solutions and applications are described below, including their usage.

d. Solutions

By creating decentralized projects, without depending on the decision mechanism of the authority in centralized structures, we promise to be safer against any attack or hacking, and faster against projects that are kept waiting for days. Thus, we

developed our first project, NITROSTARTER, with Blockchain, one of the most popular technologies of the recent period. Cryptocurrency projects will be able to organize "Sale, Airdrop and Bounty" events on this platform. Users will be able to examine the projects, invest in the ones they want, and participate in the reward events of the ones they want. Airdrop and Bounty categories will become available in the next updates.

2. NITROSTARTER

NITROSTARTER is a decentralized kickstarter, that is fundraising and rewards event platform that allows WEB3 projects to launch and raise funds, announce and distribute rewards, while also

allowing their communities to grow. All transactions are decentralized! We created an environment for projects to reveal their potential and introduce themselves. We established NITROSTARTER to attract investors by explaining the projects in the best possible way. In this case, investors will have a platform where they can invest in cryptocurrency projects by examining the projects in detail. Investors will fund projects they trust and believe in. In this way, it will work as a system where both projects and investors gain and mutual trust is established. Application processes for projects are carried out decentrally through our NITROSTARTER website. The applied projects are approved if they meet our standards, then everything is sent to our smart contract. By connecting their wallets, our users are sent to the smart contract and carry out their investment transactions decentralized, safely and quickly.

We aimed to offer solutions to many problems for our users, such as our easy-to-understand, user-friendly site and application designs, not charging any fees other than the transaction fee, and providing safe and fast transactions. Our transactions are completely decentralized and do not depend on any authority. However, it is our duty to ensure the trust of our investors, users and projects. For this reason, cryptocurrency projects will carry out the application stages in a decentralized manner. Investors and users will fund the project they want to invest in by reviewing the projects and their descriptions on NITROSTARTER. Once the funds are claimed and the IDO process is completed, the listing conditions will be met and investors' funds will be guaranteed.

NITROSTARTER also will include Airdrop and Bounty events. With Airdrop and Bounty events, cryptocurrency projects can add gift and reward conditions to their users and investors through NitroStarter. As NitroStarter, we unite users (investors) and

cryptocurrency projects on our platform by organizing "Airdrop" and "Bounty" events. Each cryptocurrency will be free to add its own terms. Users also will benefit from rewards if they fulfill the conditions of the project they want.

2.1. Other Projects

Nitroken continues to produce and develop projects in the fields of DEFI and SocialFi. After our first Project NitroStarter is completed and published, after it reaches the target user and updates are made, other projects will be developed and published. The next projects have been identified as NFT Marketplace, NitroSwap in the DEFI field and will move into the design stages.

Other projects that will be released in the future are NitroLive and N-Feed. The field of these projects is SocialFi. Our users will enjoy making money while having fun on our social media. Our future

projects will be developed decentralized, Blockchain-based.

Detailed information about the projects will be provided to our users in the future.

3. NITROKEN TOKENOMICS

Tokenomics was originally created by combining the English words “token” and “economics”. Tokenomics refers to data containing basic information such as the total supply, token distribution and functions of any cryptocurrency. In this category, the official information of NITO, the official cryptocurrency of NITROKEN, is given and explained in detail.

Token Name: NITROKEN

Symbol: NITO

CONTRACT ADDRESS(BSC):

Total Supply: 500.000.000 NITO

Decimal: 18

Our total supply is 500,000,000 NITO. It is planned that 20% of the token will be added to liquidity. According to this rate, 100,000,000 NITO will be used for liquidity on the exchanges. 10% of the total supply has been allocated for marketing strategies in order to make our token usable on more platforms, reach more people and increase its usage areas.

Nitroken Team faces huge costs to develop and produce projects. In order to cover these costs, 8% of our total supply is reserved for Development. At the same time, 15% of the total supply is allocated to our team, which spends all its time on project development, marketing, finance, social media and various collaborations. 10,000,000 NITO has been allocated for Public Sale. The determined sales dates will be announced by the NITROKEN team through our official channels. 10% of the total supply has been reserved under the name Backers & Investors for our investors who want to sponsor our projects. 50,000,000 NITO will be sold to investors who want to become sponsors at a special price according to the conditions of the period.

Airdrops and Bounties will be organized as ecosystem rewards, and we will have special gifts and campaigns for our users and followers. Details and dates of these campaigns will be shared through our official channels. 25,000,000 NITO has been allocated for the reward campaigns to be organized. This corresponds to 5% of the total supply. 20% of the total supply, that is, 100,000,000 NITO, has been allocated for project reserves. It is planned to use tokens for many costs such as producing, publishing and keeping the project up to date and covering various transaction fees. NITOKEN will organize various campaigns and develop marketing strategies in order to expand its network and reach more communities. 10% of the total supply is reserved for one of these, "Partnerships". Collaborations and partnerships will be made with various platforms, individuals or coins and tokens.

3.1. Token Distribution

Liquidity: 20% 100.000.000 NITO

Marketing: 10% – 50.000.000 NITO

Development: 8% – 40.000.000 NITO

Team: 15% – 75.000.000 NITO

Public Sale: 2% – 10.000.000 NITO

Backers, Investors: 10% – 50.000.000 NITO

Ecosystem Rewards: 5% – 25.000.000 NITO

Reserve: 20% – 100.000.000 NITO

Partnerships: 10% – 50.000.000 NITO

4. NITROKOKEN ROADMAP

In this section, NITROKOKEN's road map, the steps it wants to take, its goals and objectives will be explained. NITROKOKEN examined Blockchain and Cryptocurrency projects during the 2nd and 3rd quarter of 2023. As a result, NITROKOKEN has planned the ways it will advance in the sector and which areas it will focus on. Website designs and social media establishment were planned. In the last quarter of 2023, NITROKOKEN began to be officially established.

In the last quarter of 2023, our token NITO, our first Blockchain-based, decentralized project NitroStarter, our audit report, website, Whitepaper and Pitch Deck will be fully ready and published. We will organize a Public Sale by making the necessary meetings with organizations and institutions. When the Public Sale ends, we will be listed on the most appropriate stock exchange for our project. Details and all dates will be announced through our official channels.

In the first quarter of 2024, we will continue to have good marketing campaigns and collaborations. We are working non-stop with all our strength to see NITROKEN in the most beautiful places. We will continue to develop our first project in the second quarter of 2024, always support its use by integrating it with technologies, and implement our other projects.

4.1. Future of NITROKEN

Although Nitroken has realized its first project in the field of DeFi, it will develop its other projects on SocialFi and DeFi. Nitroken is an organization in constant development. Thanks to its innovative and constantly changing structure, it tends to continue to grow by adapting and designing its projects to the latest technologies. Since it is our priority to make the brand value more valuable day by day, we will become one of the biggest in the market by taking into account the opinions of our investors and customers.

We will deliver NITO, the currency of Nitroken, to our investors through the most preferred and reliable exchanges. With our first project, NitroStarter, we will try to protect the values and rights of both parties by supporting the best cryptocurrency projects and providing a safe and reliable environment to bring them together with investors.

5. CONCLUSION

This Whitepaper is the first version of the Nitroken Organization and the NITO cryptocurrency. NITROKEN, which examines the market and directs its work in line with DEFI and SocialFi, developed its first project as NitroStarter. NITROKEN has declared its 4-quarter road map. Acting in this direction, it will continue its efforts to expand the usage areas of its projects and its currency, NITO.

NITROKEN team, which always works integrated with current technologies, develops its projects as innovative, easy to use and easy to understand. NITROKEN, which develops its projects on a Blockchain-based and decentralized basis, constantly renews and improves itself by paying attention to the wishes of its users.
